

DO NOT TURN THIS PAGE UNTIL YOU ARE INSTRUCTED TO DO SO

- ❖ Write your name below on the space provided.
- ❖ This test has a total of 4 pages.
- ❖ Work the problem in the space provided. If you need more space, write on the back of the test.
- ❖ For some credit, draw a cake on this page.
- ❖ To insure maximum credit, show your work. In general, full credit will not be given for unsupported answers.
- ❖ Look only at your test. Don't give me the impression that you are cheating.
- ❖ Be sure to write neatly. If I cannot read what was written, do not expect the problem to be graded.
- ❖ If you finish early, go over the test again.

Good luck!

*Circle Final Answers*

*fancy!*

1) (4 points each) Label the following as either true or false. Use the word “true” or “false” to mark your answer. If false, explain why or give a counter-example:

a)  $7 \mid 14$  \_\_\_\_\_

b)  $8 \mid 4$  \_\_\_\_\_

c) If 2 divides into a number and 6 divides into the same number, then 12 also divides into that number.

d) If 12 divides into a number, then both 2 and 6 must also divide into that number.

2) (4 points) List the first 15 prime numbers:

3) (4 points each) Write the prime factorization for the following numbers:

a) 108

b) 350

4) (3 points) What is the divisibility test for...

a) 6?

b) 9?

5) (5 points each) Label the following numbers as perfect, abundant, or deficient. Be sure to show supportive work:

a) 6

b) 17

c) 24

6) (5 points each) A Harshad Number is a positive integer which is divisible by the sum of its digits. For example, the number 18 has digits 1 and 8 whose sum is 9. Note that  $9 \mid 18$ . Determine if the following numbers are Harshad Numbers. Be sure to show supportive work:

a) 24

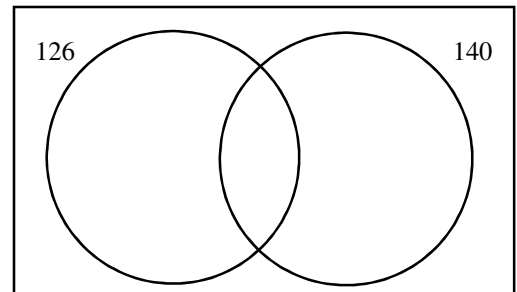

b) 37

c) 190

7) (5 points) Patrick needs to order a total of 46 SpongeBob hats for his math class. The hats are only sold in packs of 3, 7, and 11. How many of each pack would he need to get a total of 46 hats?

8) (6 points) For the numbers 126 and 140, find the GCF and the LCM using your favorite method. Be sure to label your answers:

9) (4 points) Using your work above, fill in the Venn Diagram for the numbers 126 and 140:

10) (5 points) Find the LCM of 126, 165, and 154 using your favorite method:

11) (5 points) SpongeBob, Patrick, and Sandy work at the Krusty Krab to check Krabby Patties for freshness. SpongeBob checks every 12<sup>th</sup> patty, Patrick checks every 8<sup>th</sup> patty, and Sandy checks every 21<sup>st</sup> patty. What will be the first patty checked by all three?

12) (5 points) Write the first 10 terms of the Fibonacci Sequence:

13) (3 points each) Either referring to the discussion in class or to the movie *Donald Duck in Mathmagic Land*, give two examples for each part where the following can be seen in everyday life:

a) The Fibonacci Numbers

b) The Golden Ratio
