Round only the final answer to two places as needed.

1) (4 points) Draw an equivalent graph to the given graph below by connecting the vertices:

2) (8 points each) For the following graphs below, label each vertex with its degree. Also, determine if there is an Euler Circuit, Euler Path, or neither. **If there is an Euler Circuit or Euler Path, give an example of one.** If neither, explain why not:

a)

b)

3) (3 points each) Draw a graph that meets the following requirements or explain why the graph cannot exist.

a) A graph where every edge is a bridge and the total degree is 6:

b) A graph where every edge is a bridge and would also contain an Euler Circuit:

4) Mike needs to do some shopping the day after Halloween to buy candy to give away for next year. He finds the distances between the stores that he plans on visiting. The distances are in miles:

	Home	Giant Eagle	Target	Walmart
Home	X	2.9	1.8	3.2
Giant Eagle	2.9	X	4.9	3.6
Target	1.8	4.9	X	7.6
Walmart	3.2	3.6	7.6	X

a) (3 points) Based on the information in the chart, draw a weighted graph below:

b) (7 points) List the three unique Hamilton Circuits for this graph and find the corresponding total weight. According to the Brute Force Method, which Circuit should Mike choose?

c) (4 points) For the same graph in part *a*, solve the problem using the Nearest Neighbor Method:

5) (2 points each) Define the following terms. Examples will not be accepted for credit:

a) Loop

b) Tree

6) (6 points) For the weighted graph below, draw a minimal spanning tree. Also, declare what the minimal weight is:

7) (2 points each) For the following graph, select the **best** answer from the following list. Not all terms will be used:

Path Circuit Euler Path Euler Circuit Hamilton Path Hamilton Circuit

- a) *ABCCFDEA* _____
- b) *BCFDEAB* _____
- c) *FDEABC* _____

b) 67.5 centimeters to inches:

c) 10 feet to millimeters:

d) 14,988.5 mm to km:

9) (6 points) In 2017, the fastest car in the world, the Koenigsegg Agera RS, could travel at a speed of 447.19 kilometers per hour. How fast is this speed in feet per second?

10) (6 points) One curtain panel measures 42 inches by 90 inches. If the seamstress will use fabric that costs \$20 per square yard, how many square yards does she need to make **two curtains** and how much will it cost for both? Do not round until the very end of the problem.
