

DO NOT TURN THIS PAGE UNTIL YOU ARE INSTRUCTED TO DO SO

- ❖ Write your name below on the space provided.
- ❖ This test has a total of 5 pages.
- ❖ Work the problem in the space provided. If you need more space, write on the back of the test.
- ❖ To insure maximum credit, show your work. In general, full credit will not be given for unsupported answers.
- ❖ Look only at your test. Don't give the impression that you are cheating.
- ❖ Be sure to write neatly and in pencil. If I cannot read what was written, do not expect the problem to be graded.
- ❖ If you finish early, go over the test again.

Good luck!

Name _____

circle final answers

1) (2 points each) Find the domain of the following functions:

a) $f(x) = 3x^2 - 8x + 1$

b) $g(x) = \frac{7-5x}{x^2+6x-16}$

2) (6 points) For the function $f(x) = x^2 + 10x + 4$, find and simplify $\frac{f(x+h) - f(x)}{h}$:

3) (3 points each) For the piecewise-defined function $f(x) = \begin{cases} 2x+1 & x \leq -1 \\ -3x+5 & x \geq 3 \end{cases}$

a) Evaluate the function:

i) $f(-10)$

ii) $f(0)$

iii) $f(3)$

b) Sketch a graph:

4) (1 points each) Short answer: In your own words, describe the formula for the...

a) Cost Function:

b) Revenue Function:

c) Profit Function:

5) (1 point each) Explain the following terms:

a) Break even

b) Equilibrium quantity and value

6) (4 points each) With the announcement of the new Pixel phone, CwazyCases will start making custom cases for the phone and will sell them for \$66.50 each. The cost to build each case is \$24.50 and there is an additional cost of \$2100 for tools and various supplies. Let x represent the number of cases made and sold.

a) Write and label the corresponding Revenue, Cost, and Profit functions for this problem:

b) When only 40 cases are sold, is there a profit or a loss? Show your work to support your answer.

c) How many cases must be sold to break even?

7) (4 points each) It was found that the price and demand for a Cactar plushie can be given by $p = D(q) = 132 - 1.75q$ where p is price in dollars and q is the demand in hundreds of plushies.

Suppose that the price and supply (in hundreds of plushies) is given by $p = S(q) = 1.25q$.

a) Find and interpret, using the language of the problem, the following.

i) $D(60)$

ii) $S(26)$

b) Find and interpret the intercepts of the Demand function:

c) Find and interpret the intercept of the Supply function:

d) Find the equilibrium quantity and equilibrium price:

8) (3 points each) Jo Jo Ba decided to drop the javelin and start launching Easter baskets that she found on her neighbors' yard. Throwing the baskets from a 50-foot cliff, the height of the basket, h , in feet, can be given by the function $h(t) = -16t^2 + 73.6t + 50$ where t is time in seconds.

Determine the following, rounding to two places as needed.

- a) At what time is the Easter basket the highest off of the ground? b) What is the highest height the basket reaches?

c) When does the basket hit the ground?

d) What is the domain of this function?
Hint: Remember that t represents time.

9) (3 points each) For the function $f(x) = -2(x + 1)^2 + 3 \dots$

- a) List the transformations needed to sketch a graph: b) Sketch a graph based on your steps:

Step 1:

Step 2:

Step 3:

10) (4 points each) For the function $f(x) = (x + 2)^3(x - 4)^2$

- a) Find the leading term and state which quadrants the arrowheads will be in and why: c) Sketch the graph based on parts a and b:

b) Fill in the chart:

Zero	Multiplicity	Touch/Cross

11) (2 points each) For the rational function $f(x) = \frac{x^2+6x}{x^2+6x+5}$, determine the location of the following:

a) The vertical asymptote(s):

b) The horizontal asymptote:

12) (4 points) Graph $g(x) = 3^{x+1} - 4$ by transforming the given function $y = 3^x$. Be sure to move and label the given points and asymptotes.

13) (3 points each) The number of irate Dutch people in the Netherlands was growing exponentially after someone ate a stroopwafel without properly heating it. The number of irate Dutch people can be modeled by the function $d(x) = 2.14e^{0.44x}$ where x is the number of days after the stroopwafel was improperly ingested and d is the number of irate Dutch people **in thousands**. Round to the nearest whole number as needed.

a) Approximately how many Dutch people were upset after the first week?

b) How many became irate on the 9th day?

c) Using the INTERSECT command on your calculator, during which day will there be 12,000 irate Dutch people?
